

Designed for
the business of fashion.

Fashion is unique.

**And YuniquePLM
is designed for fashion.**

Fashion is unique.

Our industry has seen some of the world's premier brands invest millions of dollars and years of effort to implement PLM solutions designed for the automobile or aerospace industries only to be left with unfulfilled value propositions and employees who refuse to adopt the system.

Designed for the business of fashion.

Ideal for apparel, retail,
footwear and accessory
companies of any size.

Embraced by designers, suppliers and executives alike.

YuniquePLM is easy to use and highly graphical but it's also a serious tool to guide decision making. Your creative team will revel in its intuitive interface. Your global partners will enjoy it because it allows them to work in their native language. Decision makers will rely on it to guide continuous improvement efforts and improve profitability.

Seamless integration with your Gerber CAD system.

Now, you can utilize data and images from your pattern design, grading and marking system within YuniquePLM, eliminating duplication of effort and minimizing errors. Save time by populating YuniquePLM spec sheets with measurements created in your CAD system and share all of these details with colleagues and suppliers.

The ideal foray into PLM for companies of all sizes.

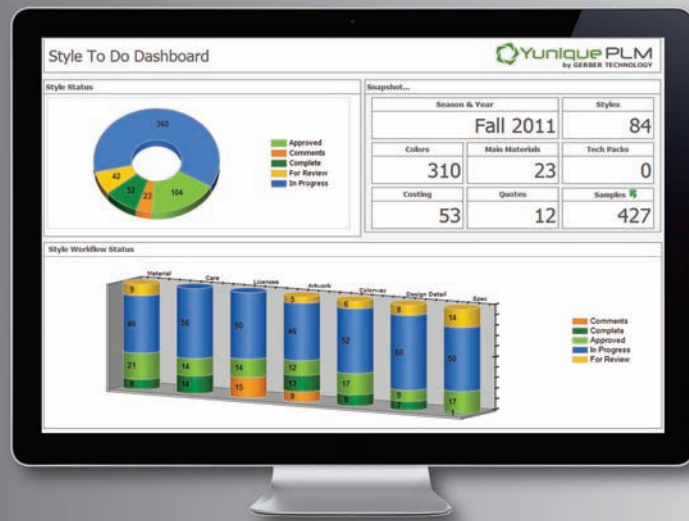

YuniquePLM was configured according to industry best practices amassed over decades of implementing PLM systems for leading fashion companies. Now, companies of any size can quickly reap the benefits of PLM. And because YuniquePLM is founded on an architecture that provides the scalability and extensibility to fully integrate into the enterprise, even large companies can quickly take full advantage of it.

In fact, recently, the world's largest independent software testing firm, Applabs, validated the scalability of YuniquePLM to easily meet the needs of 1,000 simultaneous users – the equivalent of more than 3,300 total seats in a typical fashion industry enterprise deployment.

Powerful information that's critical to your business' success.

YuniqueBI enables you to consolidate data from your YuniquePLM system with your ERP (enterprise resource planning) and other third-party systems to get the complete business picture. It provides visibility to information in easy-to-read, highly-graphical formats that help decision makers identify key cost drivers in the product development process and determine opportunities for savings.

Up-to-date business critical data
is only a touch away
using any mobile device.

Take comfort in our worldwide support network.

During the discovery, design, implementation and deployment stages, our team of experts work closely with individuals in each level of your organization to configure the system according to your unique business processes.

But our support doesn't stop there. With resources on the ground in 129 countries, we're available to ensure you and your global partners quickly adopt and succeed with YuniquePLM, helping you realize the greatest return on your investment.
